PROFESSIONAL SUMMARY

Results-oriented Data Scientist and Computer Engineering student with expertise in building deployable machine learning systems and AI-driven solutions. Proven ability to develop Retrieval-Augmented Generation (RAG) applications and design predictive models to extract actionable business insights. Adept at bridging the gap between raw data and optimized frontend applications.

TECHNICAL SKILLS

Programming:	Python, SQL, JavaScript
Data Science & ML:	Machine Learning, Feature Engineering, Model Evaluation, Data Preprocessing
Libraries & Tools:	Pandas, NumPy, Scikit-learn, Streamlit
AI Systems:	Retrieval-Augmented Generation (RAG), Model Deployment
Version Control:	Git, GitHub

EDUCATION

Gokul Global University	CGPA: 9.4
Bachelor of Engineering in Computer Engineering	Siddhpur, India

EXPERIENCE

Frontend Developer Intern	Marg Infotech
- Engineered data-driven web applications, successfully integrating robust frontend interfaces with backend databases. - Optimized SQL database queries to manage and retrieve structured data efficiently, supporting seamless application functionality. - Enhanced system performance and user experience by redesigning and optimizing UI components. - Collaborated with backend engineering teams to ensure secure and seamless data flow across the application architecture.	

PROJECTS

Heart Disease Prediction Model	Python, Scikit-learn, Pandas
- Developed a predictive machine learning model utilizing a Random Forest Classifier to classify the likelihood of heart disease from comprehensive clinical datasets. - Executed rigorous data cleaning, feature engineering, and preprocessing techniques to optimize input variables for training. - Evaluated the model utilizing performance metrics, achieving an exceptional 97% prediction accuracy alongside optimized precision and recall.	
RAG-Based AI Teaching Assistant	Python, Streamlit, RAG Frameworks
- Designed and implemented a Retrieval-Augmented Generation (RAG) pipeline to deliver highly contextual and accurate Q&A capabilities. - Built an optimized document retrieval mechanism that significantly enhanced the precision of AI-generated responses. - Deployed the final interactive AI system via Streamlit to ensure an accessible and intuitive user interface.	

Predictive Machine Learning Pipelines

Python, Scikit-learn

- Developed and trained supervised machine learning models to solve complex predictive analytics challenges.
- Performed end-to-end data processing, including data cleaning, imputation, and feature engineering, to prepare robust training sets.
- Analyzed model performance using appropriate evaluation metrics, iteratively tuning hyperparameters to improve overall accuracy.
